◈ SyncAI by Stigg

Industrial AI Infrastructure for Alberta Operations

What We Do

SyncAI is an industrial AI infrastructure platform that powers autonomous operations for asset-intensive industries. We deploy 15 specialized AI agents that integrate into existing industrial environments, augmenting maintenance, reliability, engineering, and executive decision-making systems.

> **Think AWS IoT for industrial operations — purpose-built for Alberta.**

Who We Serve

Primary Focus: Alberta

- Oil sands operators
- Mining facilities (surface & underground)
- Petrochemical plants
- Midstream infrastructure

Secondary Markets

- Manufacturing (process & discrete)
- Heavy equipment operators
- Multi-site industrial portfolios
- Healthcare infrastructure

The 15 AI Agent Platform

Maintenance & Reliability

- Predictive Failure Detection
- Root Cause Analysis
- Reliability Engineering
- Maintenance Planning
- Shutdown Planning

Operational Excellence

- Production Throughput
- Energy Efficiency
- Cost Optimization
- Continuous Improvement

Strategic & Governance

- Asset Criticality & Strategy
- Capital Planning & Budget
- Risk & Compliance
- Executive Decision Support

Operations Support

- Preventive Maintenance
- Workforce & Logistics

Measurable Impact

5–15%
Reduction in unplanned downtime

8–20%
Improvement in maintenance efficiency

20–30%
Faster decision cycles

2,000–5,000%
ROI from downtime reduction

Infrastructure, Not Software

We augment existing infrastructure — we don't replace it.

Deployment Models

- ✓ On-premise (air-gapped)
- ✓ Hybrid cloud (Azure-native)
- ✓ Enterprise data governance

Integration Points

- CMMS/EAM (Maximo, SAP)
- SCADA, DCS, historians
- ERP and financial systems
- IoT sensors and inspections

Why Alberta

Built in Alberta to serve Alberta's asset-intensive industries first. Our objective is to establish Alberta as a global leader in industrial AI infrastructure.

Competitive Advantages

- Purpose-built for O&G/Mining (not generic IoT platforms)
- Alberta-based team with deep industry knowledge
- Security-first architecture (on-premise deployment options)
- Enterprise-scale economics ($500K–$2M contracts)

Current Stage

Technical Readiness

- ✓ 15 AI agents validated
- ✓ Production-ready platform
- ✓ Enterprise deployment framework

Commercial Stage

- Seeking 2–3 design partners
- Reduced pricing for early adopters
- 30–60 day POC (no cost)
- Joint case study at launch

Strategic Introductions Sought

Decision Makers

- VP Operations / Directors of Maintenance (O&G operators)

- Plant Managers (mining/petrochemical facilities)
- CTOs / Innovation Leads (mid-size producers)

Target Companies (Alberta)

- **Tier 1:** Suncor, Cenovus, CNRL, Imperial Oil, Teck, Nutrien
- **Tier 2:** Mid-size regional operators and service companies

Next Steps

Interested in learning more? We offer:

- **Technical Architecture Overview** — 30-min briefing for CTOs/VP Ops
- **Proof-of-Concept Proposal** — 30–60 day pilot, no cost
- **Design Partner Program** — Co-development with reduced pricing
