2025-11-03: (FAITH) Client saw surgeon for follow up this morning. I contacted the PT Consultant for AB surgical group and left a message and also sent an email. Requested information on the surgeon's opinion on any restrictions to advancement of his rehab program.
Spoke with client later in the day. He explained the sensation he has with "locking and slipping". The surgeon is not concerned and advises that he continue with PT.
We will continue to advance loading of biceps in its individual actions
FG
2025-11-03: (FAITH) Spoke with Dave Wong, PT consultant re:
Concerns about the integrity of the Biceps tenodesis as patient consistently reports a "slipping" sensation at the anterior shoulder, accompanied by significant pain. By virtue of elimination we identified the biceps as the probable trigger and wanted to get imaging done prior to advancing his modified work to the next stage.
He advises that since patient is still under the care of the surgeon, they would require a request from him.
I will discuss with client and surgeon's PT and send reporting in accordance F/U: 2025-11-05
